

SUBSIDIARY BODY FOR IMPLEMENTATION

Thirteenth session

Lyon, 11-15 September 2000

Item 9 of the provisional agenda

**NATIONAL COMMUNICATIONS FROM PARTIES INCLUDED
IN ANNEX I TO THE CONVENTION: GREENHOUSE GAS
INVENTORY DATA FROM 1990 TO 1998**

Report on national greenhouse gas inventory data from Annex I Parties for 1990 to 1998

Note by the secretariat

A.1. Aggregate emissions and removals of all greenhouse gases (CO ₂ equivalent) by source/sink category, including and excluding land-use change and forestry, 1990	10
A.2. Aggregate emissions and removals of all greenhouse gases (CO ₂ equivalent) by source/sink category, including and excluding land-use change and forestry, 1998	12
A.3. Anthropogenic CO ₂ emissions by source category, excluding land-use change and forestry, 1990	14
A.4. Anthropogenic CO ₂ emissions by source category, excluding land-use change and forestry, 1998	16
A.5. Anthropogenic CO ₂ emissions from fuel combustion, 1990	18
A.6. Anthropogenic CO ₂ emissions from fuel combustion, 1998	20
A.7. Anthropogenic CO ₂ emissions and removals from land-use change and forestry, 1990	22
A.8. Anthropogenic CO ₂ emissions and removals from land-use change and forestry, 1998	24
A.9. Anthropogenic CH ₄ emissions by source category, 1990	26
A.10. Anthropogenic CH ₄ emissions by source category, 1998	28
A.11. Anthropogenic N ₂ O emissions by source category, 1990	30
A.12. Anthropogenic N ₂ O emissions by source category, 1998	32
A.13. Emissions of hydrofluorocarbons, perfluorocarbons and sulphur hexafluoride (CO ₂ equivalent), 1990, 1995 and 1998, and percentage change by Party	34
A.14a. Emissions of hydrofluorocarbons, 1990, 1995 and 1998	36
A.14b. Emissions of hydrofluorocarbons, 1990, 1995 and 1998	38

	<u>Page</u>
A.15. Emissions of perfluorocarbons and sulphur hexafluoride, 1990, 1995 and 1998	40
A.16. Anthropogenic emissions of CO, NO _x , NMVOCs and SO ₂ , 1990 and 1998	42
A.17. Anthropogenic emissions of CO ₂ , CH ₄ and N ₂ O from international bunkers, 1990 and 1998	44
A.18. Anthropogenic emissions of CO and NO _x from international bunkers, 1990 and 1998	46
A.19. Anthropogenic emissions of NMVOCs and SO ₂ from international bunkers, 1990 and 1998	48
B.1. Aggregate emissions of CO ₂ , CH ₄ , N ₂ O, HFCs, PFCs and SF ₆ (CO ₂ equivalent), 1990-1998, excluding CO ₂ emissions/removals from land-use change and forestry	50
B.2. Aggregate emissions of CO ₂ , CH ₄ , N ₂ O, HFCs, PFCs and SF ₆ (CO ₂ equivalent), 1990-1998, including land-use change and forestry	52
B.3. Aggregate emissions of hydrofluorocarbons, perfluorocarbons and sulphur hexafluoride, 1990-1998 (Gigagrams of CO ₂ equivalent)	54
B.4. Total anthropogenic CO ₂ emissions, excluding land-use change and forestry, 1990-1998	56
B.5. CO ₂ emissions from fuel combustion, 1990-1998	58
B.6. CO ₂ emissions from transport, 1990-1998	60
B.7. CO ₂ emissions from industrial processes, 1990-1998	62
B.8. Anthropogenic CO ₂ emissions and removals from land-use change and forestry, 1990-1998	64
B.9. Total anthropogenic CH ₄ emissions, 1990-1998	66
B.10. CH ₄ fugitive fuel emissions, 1990-1998	68

	<u>Page</u>
B.11. CH ₄ emissions from agriculture, 1990-1998	70
B.12. CH ₄ emissions from waste, 1990-1998	72
B.13. Total anthropogenic N ₂ O emissions, 1990-1998	74
B.14. N ₂ O emissions from fuel combustion, 1990-1998	76
B.15. N ₂ O emissions from industrial processes, 1990-1998	78
B.16. N ₂ O emissions from agriculture, 1990-1998	80
B.17. N ₂ O emissions from agricultural soils, 1990-1998	82
C.1. Emission estimates for the European Community, 1990	84
C.2. Emission estimates for the European Community, 1991	85
C.3. Emission estimates for the European Community, 1992	86
C.4. Emission estimates for the European Community, 1993	87
C.5. Emission estimates for the European Community, 1994	88
C.6. Emission estimates for the European Community, 1995	89

C.8. Emission estimates for the European Community, 1997	91
C.9. Emission estimates for the European Community, 1998	92

I. INTRODUCTION

A. Mandate

1. In accordance with decisions 9/CP.2¹ and 3/CP.5 of the Conference of the Parties (COP), national inventory data on emissions by sources and removals by sinks are to be submitted by Annex I Parties by 15 April of each year. The submission of national inventory data for the years 1990 to 1998 was due by 15 April 2000. The Conference of the Parties, by its decision 6/CP.3, requested the secretariat to collect, process and publish, on a regular basis, national greenhouse gas (GHG) inventories submitted annually by Annex I Parties in accordance with decision 9/CP.2. As well, by its decision 6/CP.5, the Conference of the Parties requested the secretariat to prepare documentation in support of the technical review of GHG inventories outlined in that decision.

B. Scope of the note

2. The latest available GHG data for 1990-1998, and data from earlier submissions for Annex I Parties that have not yet reported inventories this year, have been compiled in this document. It contains a brief description of the status of reporting of annual GHG emission inventories, highlighting the timeliness of reporting and completeness of the data reported. The tables contain data on GHG emissions and removals by 38 out of 40 Annex I Parties² for the period 1990-1998, where available, as provided in the annual submissions of GHG inventories or national communications.

3. This document has a dual purpose: it is the traditional annual set of national GHG inventories submitted so far by Annex I Parties and the compilation of inventory data constituting part of the synthesis and assessment report requested by the Conference of the Parties in the context of its decision 6/CP.5 on the technical review of GHG inventories. The document's structure resembles that of previous sets of inventory data, with the inclusion of some additional data where possible (e.g. on land-use change and forestry).

II. STATUS OF REPORTING

4. The data in this document are compiled from the recent submissions of 30 Annex I Parties that have submitted their GHG inventory data due on 15 April 2000 (see table 1) as well as from previous annual inventories or national communications for eight other Annex I Parties. As the guidelines for reporting national GHG inventories have been revised since last year's submissions, this is the first time Annex I Parties have reported using the new guidelines that were adopted by the COP at its fifth session (decision 3/CP.5). The new guidelines, which include a common reporting format, provide for a more uniform and complete reporting of inventory data than the previous guidelines.

¹ For the full texts of decisions adopted by the Conference of the Parties at its second, third and fifth sessions, see documents FCCC/CP/1996/15/Add.1, FCCC/CP/1997/7/Add.1 and FCCC/CP/1999/6/Add.1, respectively.

² Data for Belarus and Croatia are not included as Croatia has not yet submitted an annual inventory or national communication and the Convention entered into force for Belarus only on 9 August 2000.

5. The existence of these guidelines has apparently contributed to an increase in the number of Annex I Parties reporting, as well as the timeliness and completeness of submissions. The effort made by those Annex I Parties that have submitted recent inventories to adhere to the new guidelines in such a short period of time is commendable. Twenty-three Parties have reported in full or partially using the common reporting format of the new guidelines (see table 1). Although reporting has not been complete or the guidelines fully adhered to, Annex I Parties have indicated their intent to continue to improve reporting as they adapt to the new guidelines.

6. As not all Annex I Parties provided recent submissions, or did not include data for all years in their most recent submissions, data have been compiled for the period 1990-1998 from various sources. Table 2 below provides an indication of which inventory submissions or national communications were the source of data for the relevant years. As the information for these years for some Annex I Parties has been taken from various submissions, trends in emissions may not be consistent.

7. The data available from the various submissions are not always complete. In addition to not having data for all years, data were not always available for all gases or source and sink categories required in the guidelines. Where data were not available, the tables contain blank spaces.

Table 1. Dates of 2000 GHG inventory submissions

Australia^a	13 July 2000	Italy^{ac}	20 March 2000
Austria^a	14 April 2000	Latvia^a	16 April 2000
Belgium^a	20 April 2000	Lithuania^a	21 April 2000
Bulgaria^a	14 April 2000	Monaco	15 May 2000
Canada^a	13 July 2000	Netherlands^{ac}	19 May 2000
Czech Republic^a	21 April 2000	New Zealand^a	29 April 2000

Greece^a	27 June 2000	Switzerland^a	14 April 2000
Hungary^a	29 May 2000	United Kingdom^a	19 May 2000
Ireland^a	17 April 2000	United States^a	11 April 2000

^a Party provided all or some of its submission using the common reporting format.

^b Party provided two submissions in 1999. The second submission contained data for 1998 and for the purpose of this document is considered as the submission for the year 2000.

^c Party provided its submission in two parts. First part was received on the date indicated in table.

Table 2. Sources of GHG emissions data (by Party and type of submission)^a

^a This table indicates the source of GHG emissions data as well as whether data were available for specific years. However, it does not indicate whether the inventory submitted for that year covers all gases, categories, etc.

^b The Czech Republic provided revised CH₄ data for 1990 to 1996 in the inventory submission of 1999.

^c Data for 1990 to 1994 are taken from the 2nd national communication and the supplemental inventory submission provided by the Party.

^d A preliminary GHG inventory was submitted as part of the forthcoming 1st national communication.

NC1=First national communication
NC2=Second national communication

INV98=inventory submission 1998
INV99=inventory submission 1999

no data=data were not provided in the national communications or annual inventory submissions
INV00=inventory submission 2000
RPT95=Report submitted in 1995

Tables

General notes

The tables below contain numerical data on GHG inventories for 38 Annex I Parties as submitted in annual GHG emission inventories or national communications. They provide data for 1990-1998 for individual Annex I Parties, although the degree of coverage varies. This is due to differences in the coverage of years in the annual inventory submissions of Parties, as well as to lack of information in some instances.

The tables provide inventory data on carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆), ozone precursors and sulphur dioxide (SO₂), and include information on international bunkers. Information on land-use change and forestry is included in aggregate estimates, and separately from other CO₂ estimates, recognizing the ongoing methodological work by the Intergovernmental Panel on Climate Change (IPCC) in this sector. To present information on HFCs, PFCs, SF₆ and aggregate greenhouse gases in a comparable manner the secretariat has used IPCC 1995 global warming potentials (GWPs) to present information in terms of CO₂ equivalents. The footnotes to the tables should be treated as an integral part of the tables.

Tables A.1 and A.2 contain information on aggregate emissions of all greenhouse gases combined (expressed as CO₂ equivalent) for the major source categories. Inventory data on the individual greenhouse gases are presented in tables A.3-A.19. As not all Annex I Parties provided data for 1998 (the most recent year included in this document), no totals or percentage contribution by sector are given for that year in tables A.1-A.9. The trends in total greenhouse gases and in emissions of the various gases, and for the most important sectors for 1990 to 1998, are given in tables B.1 to B.17. Emission estimates reported by the European Community are presented in tables C.1 to C.9.

It should be noted that figures may differ slightly from those submitted to the secretariat as a result of rounding during data input and processing, corrections of typographical and calculation errors or omissions, and the presentation (for consistency and comparability) of subtotals and totals not provided in the annual inventory submissions, communications or other submissions.

Explanatory notes

Blanks in the tables signify an absence of quantitative information. The secretariat has chosen to leave the spaces blank in order not to complicate the reading of the tables. The figure "zero" appears in the table only when clearly reported as such by Parties.

The IPCC 1996 Revised Guidelines for National Greenhouse Gas Inventories are referred to in this document as the IPCC Guidelines, and the guidelines for the preparation of national communications by Parties included in Annex I (FCCC/CP/1999/7) as the UNFCCC guidelines. Categories of sources of GHG emissions or their sinks corresponding to the IPCC Guidelines or UNFCCC guidelines nomenclature are given in *italics*.

The following chemical symbols and abbreviations have been used:

CF₄	perfluoromethane
C₂F₆	perfluoroethane
C₃F₈	perfluoropropane
C₄F₁₀	perfluorobutane
C₆F₁₄	perfluorohexane
CH₄	methane
CO	carbon monoxide
CO₂	carbon dioxide
HFCs	hydrofluorocarbons
N₂O	nitrous oxide
NO_x	nitrogen oxides
NMVOCs	non-methane volatile organic compounds
PFCs	perfluorocarbons
SF₆	sulphur hexafluoride
SO₂	sulphur dioxide

The following units of mass have been used:

Gg	gigagram (10 ⁹ grams)
Mg	megagram (10 ⁶ grams)

The following other abbreviations have been used:

GHG	greenhouse gas
GWP	global warming potential

^a Aggregate emissions of CO₂, CH₄ and N₂O, and HFCs, PFCs and SF₆ where reported (see table A.13), using 1995 IPCC global warming potentials.

^b Includes solvent use, waste, other and CH₄ and N₂O from land-use change and forestry.

^c Aggregate emissions of all greenhouse gases excluding CO₂ emissions and removals from land-use change and forestry.

^d CO₂ estimates for land-use change and forestry as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories (see table B.8).

^e Aggregate emissions of all greenhouse gases including CO₂ emissions from land-use change and forestry.

^f In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^g The Party did not provide any estimates from the land-use change and forestry sector in its national inventory.

^a All remaining emissions from non-specific fuel combustion including emissions from military fuel use.

^b In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^c *Fuel combustion* emissions from territories of the United States are included under *other*.

^d The percentage of the total accounted for by each category has been calculated on the basis of the overall total excluding the Russian Federation and Ukraine (11 620 545 Gg) since data for the individual categories were not provided. However, the total for all the Parties given in the last column (13 919 445 Gg) does include the Russian Federation and Ukraine.

^a In this table negative values indicate net removal of CO₂ from the respective category.

^b *Other* includes regrowth associated with land clearing and prescribed burning of forests and wildfire.

^c *Other* includes emissions from anthropogenic fires outside the wood production forest.

^d Party only reported a total for the land-use change and forestry sector.

^e Estimate for *forest and grassland conversion* includes *abandonment of managed lands*.

^f *Other* includes emissions from changes in crop biomass, peat extraction, lowland drainage, and upland drainage.

^g *Other* includes landfilled yard trimmings and landfilled wood products.

^a Includes enteric fermentation and manure management.

^b Includes rice cultivation, agricultural soils, prescribed burning of savannas and field burning of agricultural residues.

^c Includes industrial processes, solvent use and land-use change and forestry.

^d Total emissions from agriculture are reported under livestock since emissions were not further disaggregated by the Party.

^a Includes *fugitive fuel* emissions and *fuel combustion* emissions other than *transport*.

^b Includes *solvent use* and *land-use change and forestry*.

^c In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^d Total emissions from *fuel combustion* are reported under other energy since emissions were not further disaggregated by the Party.

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions have been reported, as was the case for Japan and Sweden. Bulgaria reported potential emissions for HFCs.

^b The Netherlands and Poland reported potential emissions for SF₆.

^c Party indicated that HFC emissions were not estimated as reliable data are not available.

^d Party did not report the exact chemical species of all these gases so it was not possible to calculate the emissions in terms of CO₂ equivalent (see tables A.14 and A.15).

^e Party indicated that presently it is not possible to construct meaningful and robust estimates for HFCs, PFCs and SF₆.

^f 1997 data given here as 1998 data were not reported.

^g Party did not report estimates, but indicated that emissions were negligible.

^h 1996 data are given here as 1998 data were not reported.

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions were reported, as was the case for Japan. The Netherlands, Poland and Sweden reported actual emissions for PFCs, but potential emissions for SF₆.

^b Total PFC emissions include emissions of C₆F₁₄.

^c Total PFC emissions include "other" PFCs.

^d Party only reported aggregate emissions of PFCs.

^e Total PFC emissions include emissions of C₃F₈.

^f 1997 data are given here as 1998 data were not reported.

^g Party did not report estimates, but indicated emissions of PFCs and SF₆ were negligible.

^h 1996 data are given here as 1998 data were not reported.

ⁱ Total PFC emissions include C₃F₈, C₄F₈, C₄F₁₀, c-C₃F₆, C₃F₁₂, C₆F₁₄.

^j Party did not report emissions of each species for reasons of commercial confidentiality.

^a Aggregate emissions of CO₂, CH₄, N₂O and HFCs, PFCs and SF₆, where reported (see table B.3).

^b Estimates for *land-use change and forestry* are as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories (see table B.8).

^c The trend shown here may not be fully consistent, since data for the entire period were not provided in the latest submission (see table 2 in section II of this document) and different sources of data were used.

^d In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^e As the Party did not provide estimates from the *land-use change and forestry* sector for 1991-1993 and 1996, no estimates for these years are provided here.

^f As the Party did not provide estimates from the *land-use change and forestry* sector, no estimates are given in this table.

^g As the Party did not provide estimates from the *land-use change and forestry* sector for 1996 and 1997, no estimates for these years are provided here.

^h Party reported only emissions of CO₂ and CH₄, not N₂O, for 1995-1997, so no aggregate emissions are provided here.

Table B.3. Aggregate emissions of hydrofluorocarbons, perfluorocarbons and sulphur hexafluoride, 1990-1998^a (Gigagrams of CO₂ equivalent)

^a Aggregate emissions of HFCs, PFCs and SF₆, where reported, as estimates for these gases were not reported by all Parties, for all years or in sufficient detail to convert estimates to units of CO₂ equivalent.

^b Estimates include emissions of PFCs and SF₆ only.

^c Party indicated that HFC emissions were not estimated as reliable data are not available.

^d Estimates include emissions of HFCs and SF₆ only.

^e Estimates include emissions of HFCs and PFCs only.

^f Estimates include emissions of SF₆ only.

^g Party indicated that presently it is not possible to construct meaningful and robust estimates for HFCs, PFCs and SF₆.

^h Estimates for 1995 and 1997 include emissions of SF₆ only.

^a The trend shown here may not be fully consistent, since data for the entire period were not provided in the latest submission (see table 2 in section II of this document) and different sources of data were used.

^b In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^a Estimates for *land-use change and forestry* are as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories. In this table negative values in gigagrams indicate net removal of CO₂ from the *land-use change and forestry* sector; negative values in percentage represent a decrease in removals in relation to the year 1990 and positive values indicate an increase in removals, except for Australia and the United Kingdom where the negative values in percentage change indicate less emissions or greater removals.

^b The trend shown here may not be fully consistent, since data for the entire period were not provided in the latest submission (see table 2 in section II of this document) and different sources of data were used.

^c In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).
